Wel.Co Group
Level 10, 2 Southbank Boulevard
Southbank VIC 3006

7 February 2024

Dear Robert,

Rev4 Phase 1 Environmental assessment: Precinct 5, Western Freeway, Geelong-Ballan Road and Old Melbourne Road, Ballan Vic

This rev4 report is an update of our rev3 report dated 25 May 2023. This rev4 update addresses the items set out in Section 2 of the Moorabool Shire Council letter to Whiteman Property and Associates dated 21 December 2023, Re: Planning Scheme Amendment C108. The Section 2 items comprised the comments set out in the EPA Victoria letter to Moorabool Shire Council dated 1 December 2023, Re: Moorabool Shire Council – Ballan Precinct 5 – Planning Scheme Amendment C108.

1 Introduction

Connolly Environmental was engaged by Wel.Co Group to prepare a Phase 1 Contamination Assessment of the proposed Precinct 5, Western Freeway, Geelong-Ballan Road and Old Melbourne Road, Ballan. The following Lots were assessed:

Eight Lots owned by Wel.Co with an approximate total area of 87 hectares:

Address	Lot/Plan Description	Approximate area (ha)	Planning Zone
Geelong-Ballan Road Ballan 3342	Lot 1 TP886443	0.6	Rural Living Zone (RLZ) & Schedule to the Rural Living Zone (RLZ)
	Lot 2 TP886443	8.8	
Old Melbourne Road Ballan 3342	Lot 1 TP886442	8.7	
Old Melbourne Road Ballan 3342	Lot 2 TP886442	28.5	
Old Melbourne Road Ballan 3342	Lot 1 TP872395	19.0	
Old Melbourne Road Ballan 3342	Lot 2 TP872395	20.0	
Old Melbourne Road Ballan 3342	Lot 1 TP862922	0.21	
Old Melbourne Road Ballan 3342	Lot 2 TP862922	1.0	

Six Lots adjoining the Wel.Co Lots:

Address	Lot/Plan Description	Approximate area (ha)	Planning Zone
5600 Geelong-Ballan Road Ballan 3342	Lot 1 PS319354	0.6	Rural Living Zone (RLZ) & Schedule to the Rural Living Zone (RLZ)
5590 Geelong-Ballan Road Ballan 3342	Lot 2 PS319354	1.3	
5580 Geelong-Ballan Road Ballan 3342	Lot 2 LP218512	0.8	
5570 Geelong-Ballan Road Ballan 3342	Lot 1 PS308413	0.5	

462 Old Melbourne Road Ballan 3342	Lot 1 LP119886	1.9	
400 Old Melbourne Road Ballan 3342	Lot 1 TP222589	3.9	

For the purpose of this report:

- The eight Lots owned by Wel.Co are referred to as “the Wel.Co site”.
- The six adjoining Lots are referred to as “the adjoining Lots”.
- The 14 Lots are referred to collectively as “the site”.

The Wel.Co site comprised predominantly farmland with scattered vegetation. There was a shed in the southern portion and a rural irrigation channel in the western portion.

The adjoining Lots comprised rural residences with associated sheds/building and scattered trees.

The site was not covered by an Environmental Audit Overlay (EAO).

1.1 Limitations

Conclusions in this report were based on site observations and other information obtained by Connolly Environmental, and on the assumption that these data were representative and reliable. These conclusions must be read in conjunction with the assumptions and uncertainties included in the report. If site conditions or information different to that set out in the report are identified or appear to be present, please advise us promptly. We will re-evaluate our conclusions where necessary.

This report has been prepared for the exclusive use of the client. We have used a degree of care and skill ordinarily exercised under similar conditions by reputable members of our profession, practicing in the same or similar localities. No other warranty, expressed or implied, is made or intended.

This report is issued on the condition that it will not be altered, amended, or abbreviated, issued in part or issued incomplete without our prior approval. We accept no responsibility for any loss, damage or consequence that may arise from breaches of this condition.

1.2 Scope of work

The scope of work comprised:

- A detailed site history review including review of historical aerial photographs, historical maps (online), EPA priority sites register, review of list of issued certificates and statements of environmental audit as review of other available historical information relevant to the site.
- A detailed site inspection.
- Collection of 21 surface samples from across the Wel.Co site. Samples were collected at representative locations from across each of the individual lots.
- Soil vapour survey at each sample location using a portable photoionisation detector (PID).
- Analysis of selected soil samples as detailed in section 8.3 below.
- Preparation of this report, detailing the findings of the site assessment with reference to *Ministerial Direction No 1 – Potentially Contaminated Land* (DSE 1987) and the *Potentially Contaminated Land Planning Practice Note 30, July 2021* (PPN30 2021).

2 Document history and amendment register

Rev No	Date	Description/amendment(s)	Distribution
0	29 April 2022	Phase 1 Environmental assessment: Precinct 5, Western Freeway, Geelong-Ballan Road and Old Melbourne Road, Ballan Vic	Greg Miller (Wel.Co)
1	1 September 2022	The rev1 report expanded the scope of the original report to include desktop assessment of six adjoining Lots.	Greg Miller (Wel.Co)
2	8 February 2023	The rev2 report was prepared in response to Council's comment that "the contamination survey area needs to include the whole precinct, including public open space, stormwater basins and the Werribee River corridor". The report therefore incorporated specific reference to the growth types and significant features that apply to the Wel.Co landholdings based on the Ballan Framework Plan presented in the Moorabool Planning Scheme (DTP 2022).	Greg Miller (Wel.Co)
3	25 May 2023	The rev3 report was prepared in response to Moorabool Shire Council Request for Further Information (RFI) dated 15 May 2023. The rev3 report specifically addressed items 10. a) and 10. b) in Attachment 1 of the RIF.	Guy Williamson (Wel.Co)
4	5 February 2024	This rev4 update addresses the items set out in Section 2 of the Moorabool Shire Council letter to Whiteman Property and Associates dated 21 December 2023, Re: Planning Scheme Amendment C108.	Robert Hondromatidis (Wel.Co)

3 Background

3.1 Site setting

A summary of general site information for Lots comprising the Wel.Co site is provided in Table 3.1 below. A summary of general site information for the adjoining Lots is provided in Table 2.1 below. The site locality is shown in Attachment 1, Figure 1.

Table 3.1 Site information summary- Wel.Co Lots

Subject area	Area 1	Area 2	Area 3	Area 4	Area 5	Area 6	Area 7	Area 8
Lot and Plan Number	Lot 1 TP886443	Lot 2 TP886443	Lot 1 TP886442	Lot 2 TP886442	Lot 1 TP872395	Lot 2 TP872395	Lot 1 TP862922	Lot 2 TP862922
Address	Geelong-Ballan Road Ballan 3342		Old Melbourne Road Ballan 3342					
Approximate area (ha)	0.6	8.8	8.7	28.5	19	20	0.21	1
Surrounding landuse	Agricultural land and rural residential.							
Zoning	Rural Living Zone (RLZ) & Schedule to the Rural Living Zone (RLZ)							
Environmental Audit Overlay (EAO)	None as of 31 August 2022.							

Subject area	Area 1	Area 2	Area 3	Area 4	Area 5	Area 6	Area 7	Area 8
Topography	The landholdings were generally flat with a slope down to the east towards Werribee River.							

Table 3.2 Site information summary- adjoining Lots

Lot and Plan Number	Lot 1 PS319354	Lot 2 PS319354	Lot 2 LP218512	Lot 1 PS308413	Lot 1 LP119886	Lot 1 TP222589
Address	5600 Geelong-Ballan Road Ballan 3342	5590 Geelong-Ballan Road Ballan 3342	5580 Geelong-Ballan Road Ballan 3342	5570 Geelong-Ballan Road Ballan 3342	462 Old Melbourne Road Ballan 3342	400 Old Melbourne Road Ballan 3342
Approximate area (ha)	0.6	1.3	0.8	0.5	1.9	3.9
Surrounding landuse	Agricultural land and rural residential.					
Zoning	Rural Living Zone (RLZ) & Schedule to the Rural Living Zone (RLZ)					
Environmental Audit Overlay (EAO)	None as of 31 August 2022.					
Topography	The Lots were generally flat.					

3.2 Geology and hydrogeology

The Ballan map sheet (1:50,000) Geological Survey of Victoria and a check of State Government records (Lotsearch 2022) showed the site geology to comprise Newer Volcanic olivine basalt with minor scoria, tuff and agglomerate; underlain by gravel, sandy silt and clayey gravel; and swamp and lake deposits (comprising clay and silty clay, minor sandy and gravelly clay). Groundwater was likely to be encountered between 5 and 20 m below ground level, (VVG 2022). We considered that the likely groundwater flow direction was towards Werribee River located adjacent to the east boundary of the site.

4 Site history

The review of historical data for the site comprised review of:

- Aerial photographs.
- Historical maps.
- EPA priority sites register.
- Issued certificates and statements of environmental audit.

4.1 Aerial photographs

Historical aerial photographs of the site and surrounding area were reviewed for the period between 1961 and 2022 (Lotsearch 2022). A summary of observations is provided in Table 3.1 below. Copies of the aerial photographs are included in Attachment 2.

Table 4.1 Review of historical aerial photographs

Year	Area	Observations
1961	Wel.Co site	The Wel.Co site appeared to comprise open farmland with dispersed trees and an irrigation channel traversing through the northwest portion of the site, however poor aerial image quality prevented detailed observation.
	Adjoining Lots	The Adjoining Lots to the west and southeast comprised agricultural land with rural residential properties and patches of remnant vegetation, however poor aerial image quality prevented detailed observation.

Year	Area	Observations
	Surrounding area	The surrounding area comprised open farmland, agricultural land and patches of remnant vegetation. Rural residential properties were visible to the north and south of the site. Geelong-Ballan Road was visible to the west and Old Melbourne Road was visible to the south.
1970	**Wel.Co site**	The Wel.Co site did not appear to have undergone any significant changes with the exception of a dam visible in the eastern portion of the site and a shed/building structure in the southern portion of the site.
	Adjoining Lots	The adjoining Lots did not appear to have undergone any significant changes.
	Surrounding area	The surrounding area did not appear to have undergone any significant changes.
1984	**Wel.Co site**	The Wel.Co site did not appear to have undergone any significant changes.
	Adjoining Lots	The adjoining Lots did not appear to have undergone any significant changes.
	Surrounding area	Rural residential properties were visible to the east of the site. The Western Freeway appeared to have been built.
1990	**Wel.Co site**	The Wel.Co site did not appear to have undergone any significant changes.
	Adjoining Lots	The adjoining Lots did not appear to have undergone any significant changes.
	Surrounding area	Rural residential properties were visible to the northeast of the site and low density residential properties were visible to the south of the site.
2012	**Wel.Co site**	The Wel.Co site appeared to be used for cropping.
	Adjoining Lots	Rural residential properties with associated shed/building structures appeared to have been built at 5580 & 5590 Geelong-Ballan Road. Several stockpiles and accumulations of building materials/rubbish/scrap were visible at 5580 Geelong-Ballan Road.
	Surrounding area	Low density residential developments were visible to the east and south of the site.
2016	**Wel.Co site**	The Wel.Co site did not appear to have undergone any significant changes.
	Adjoining Lots	Additional stockpiles of building material/rubbish/scrap and numerous abandoned car bodies were visible at 5580 Geelong-Ballan Road.
	Surrounding area	Additional residential developments were visible to the east and south of the site.
2022	**Wel.Co site**	The Wel.Co site did not appear to have undergone any significant changes.
	Adjoining Lots	The adjoining Lots did not appear to have undergone any significant changes with the stockpiled building material/rubbish/scrap and abandoned car bodies still visible at 5580 Geelong-Ballan Road.
	Surrounding area	Additional residential developments were visible to the east of the site.

4.2 EPA Priority Sites Register

A review of the EPA Priority Sites Register (EPA 2022) showed that as at the last update of the register (28 February 2022) none of the Lots comprising the site were listed on the register and that there were no registered sites within 1 km of the site.

EPA does not have any requirements for the active management of land and groundwater contamination at sites not on the Priority Sites Register. The Priority Sites Register does not list all sites known to be contaminated in Victoria, and as such a site should not be presumed to be free of contamination because it does not appear on the Priority Sites Register.

4.3 Groundwater restricted use zones

A check of EPA records (Lotsearch 2022) identified no groundwater restricted use zones applying to the site.

4.4 List of issued certificates and statements of environmental audit

A review of EPA environmental audit data (Lotsearch 2022) showed that no certificates or statements of environmental audit had been issued for the site, and that there were no listed audit sites within 1 km of the site.

4.5 Waste management facilities and landfills

A review of the EPA Victorian Landfill Register (EPA 2022) showed that there were no landfills within 1 km of the site.

4.6 Historical online maps and photographs

The following historical online maps were reviewed:

- Australia 1:63,360 topographical maps (Commonwealth Section Imperial General Staff) dated 1936.
- NATMAP 1:100,000 topographic map, Geoscience Australia, (1981).

There was no evidence of potentially contaminating landmarks, infrastructure or activities at the site.

The topographical and NATMAP maps did not show any significant detail of the site or surrounding area. Historical maps are provided in Attachment 3.

4.7 Wel.Co site inspection

We inspected the Wel.Co site on 19 April 2022. A summary of observations is provided in Table 3.2 below.

Table 4.2. Summary of Wel.Co site inspection observations

Area	Observation
Area 1 Lot 1 TP886443	At the time of our inspection the Lot comprised fenced paddocks used for sheep grazing. The site vegetation comprised grass and other low vegetation cover.
Area 2 Lot 2 TP886443	At the time of our inspection the Lot comprised fenced paddocks used for sheep grazing. The site vegetation comprised grass and other low vegetation cover.
Area 3 Lot 1 TP886442	At the time of our inspection the Lot comprised fenced paddocks used for sheep grazing. The site vegetation comprised grass and other low vegetation cover with the exception of a remanent bushland that covered a portion to the east.
Area 4 Lot 2 TP886442	At the time of our inspection the Lot comprised fenced paddocks used for sheep grazing. The site vegetation comprised grass and other low vegetation cover with the exception of a remanent bushland that covered a portion to the east. A dam was observed to the east of the Lot.
Area 5 Lot 1 TP872395	At the time of our inspection the Lot comprised a crop (possibly canola) with a road traversing the Lot and sparse vegetation to the northwest.
Area 6 Lot 2 TP872395	At the time of our inspection the Lot comprised a crop (possibly canola) with sheep grazing and a road traversing the Lot. A shed was observed to the southwest of the Lot.
Area 7 Lot 1 TP862922	At the time of our inspection the Lot comprised an irrigation channel which traversed through the north western portion of the site.
Area 8 Lot 2 TP862922	At the time of our inspection the Lot comprised an irrigation channel which traversed through the north western portion of the site.

4.8 Summary of site history and site inspection

The review of site history information showed that the Wel.Co site had been used for agricultural (cropping and/or grazing) and rural residential purposes from as early as 1961. The irrigation channel on Areas 7 and 8 (Lots 1 and 2 TP862922) was established sometime before 1961. The Lots did not appear to have changed significantly over time and their layouts were generally consistent with those observed at the time of inspection.

Aerial photographs showed low-density residential developments to the east and south of the site from 2012 onwards.

5 Wel.Co site soil assessment

5.1 Potential contaminants of concern

Based on the site location we identified the following contaminants of potential concern:

- Petroleum hydrocarbons (as measured by analysis for TPH (total petroleum hydrocarbons) and TRH (total recoverable hydrocarbons).
- Benzene, toluene, ethylbenzene, xylenes and naphthalene (BTEXN).
- Polyaromatic hydrocarbons (PAH).
- Metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc).

However, as well as being analysed for these potential contaminants of concern, selected samples were also analysed for a full suite of analytes, in accordance with EPA publication IWRG 621 (EPA 2009).

6 Adopted environmental assessment criteria

6.1 Soil

The legal framework for the protection and management of Victoria's land environment is provided in the Environmental Reference Standard (ERS) Part 4 Land (ERS 2021). ERS Part 4 Land identifies environmental values of the land environment to be protected and provides indicators and objectives for the protection of environmental values. ERS Part 4 Land endorses the National Environment Protection (Assessment of Contamination) (NEPC, 2013) ("the NEPM"), as the key guidance document in contamination assessment.

In accordance with ERS Part 4 Land, the environmental values of the land environment that must be protected for residential and other sensitive land uses include:

- Land dependent ecosystems and species.
- Human health.
- Building and structures.
- Aesthetics.
- Production of food flora and fibre.

The NEPC (2013) investigation levels adopted for comparison of the soil analytical results for this assessment are discussed below. It should be noted that chemical concentrations above the specified NEPC (2013) investigation levels would not automatically trigger remedial action. However, exceedance of these criteria would suggest that further evaluation of the potential risks that may be posed by site contaminants is appropriate.

Land dependent ecosystems and species

In accordance with ERS Part 4 Land, the assessment criteria adopted for land dependent ecosystems and species were the NEPM criteria provided within Schedule B1 of NEPC (2013). These comprised:

- Ecological Investigation Levels (EILs); developed for selected metals and organic substances for the assessment of risk to terrestrial ecosystems. The application of EILs is dependent on soil characteristics (pH and cation exchange capacity (CEC)) and specified land use scenarios. The EIL is derived by summing the added contaminant limit (ACL) and the ambient background concentrations (ABC). An ACL is the added concentration (above the ABC) of a contaminant above which further appropriate investigation and evaluation of the impact on ecological values is required. ACLs apply to chromium (III), copper, nickel and zinc for site-specific determination. Ambient background concentrations (ABCs) of contaminants assume that the ecosystem has adapted to the ABCs. The ACLs, ABCs and calculated EILs assigned to the site are detailed below. EILs are generally applied to the top 2.0 m of soil, however, a depth of up to 3.0 m may need to be considered for plant species with greater root penetration. Contaminants at the site were considered to be aged for the purpose of EIL derivation given that they were considered to be in the soil for at least two years (NEPC, 2013).
- Ecological Screening Levels (ESLs); developed for selected petroleum hydrocarbon compounds and fractions that are relevant to the assessment of risk to terrestrial ecosystems. The application of ESLs is dependent on soil properties (coarse- or fine-grained soils) and specified land use scenarios. For an overflow carpark, commercial and industrial ESLs were considered most appropriate. Based on investigations at the site, the ESLs for fine grained soils was considered the most suitable. ESLs are generally applied to the top 2.0 m of soil, however, a depth of up to 3.0 m may need to be considered for plant species with greater root penetration.

The land use categories that provide the basis of ecological investigation are divided into the following general groups:

- Natural ecosystems: where planning provisions or land use is designated with the intention to conserve and protect the natural environment. “Areas of ecological significance” as defined in the NEPM would include national parks, state parks, wilderness areas and designated conservation areas. Applies a 99% level of protection.
- Modified ecosystems: where land is used for parks and reserves, sensitive use (residential use other than high density residential use), recreation/open space (ERS 2021); land use is broadly equivalent to HIL A, HIL B and HIL C land use scenario as defined in the NEPM. Applies an 80% level of protection.
- Highly modified ecosystems: Applies a 60% level of protection.

Further information in relation to assessment of maintenance of ecosystems including derivation and background assessment is provided in Schedule B5a, B5b and B5c of NEPC (2013).

Human health

For the protection of human health, ERS Part 4 Land states that the objective for each indicator is the health investigation or screening level in the NEPM (NEPC 2013), unless there is no such investigation or screening level; or a more appropriate site-specific objective is determined (using the risk assessment methodology in the NEPM or the background level determined in accordance with section 36 of the Act). Indicators are specified as inorganic and organic contaminants set out in Appendix A of Schedule B2 of the NEPM, and any other

contaminants present at the site as determined by the current use or site history assessed in accordance with the NEPM (NEPC 2013).

The assessment criteria adopted for human health are provided within Schedule B1 of the NEPM. These comprise:

- Health Investigation Levels (HILs); developed for a broad range of metals and organics for the assessment of human health, via all relevant exposure pathways. The application of HILs is generic to all soil types, and HILs are generally applied to the top 3.0 m for residential site use and to site specific depths (based on actual site conditions) for all other land uses.
- Interim HILs for volatile organic chlorinated substances (Interim HILs); developed for volatile chlorinated compounds via inhalation exposure pathways. The application of the interim HILs for volatile chlorinated substances limited to vapour intrusion (which contributes >99% of total risk when considering all potential exposure pathways). Interim HILs apply a simple (yet conservative) attenuation factor approach for soil and groundwater sources/plumes. It should be noted that their application is generally consistent with general exposure settings (outlined in Table 6.1 below), however residential settings are combined (regardless of exposure to soil), and secondary schools should be assessed as residential.
- Health Screening Levels (HSLs); developed for selected petroleum compounds and fractions for the assessment of human health, via inhalation and direct contact exposure pathways. The application of HSLs is dependent on specific soil properties, land use scenarios, depth and characteristics of buildings and structures. Further information including the HSL application checklist is provided in CRC (2011).

The general exposure settings that provide the basis of human health investigation are outlined in Table 6.1 below.

Table 6.1 General exposure settings (human health assessment)

Health investigation level	Definition
HIL A	Residential with garden/accessible soil including home grown produce <10% for fruit and vegetable intake (excludes poultry). Also includes children's day care centers, preschools and primary schools.
HIL B	Residential with minimal opportunities for soil access including dwellings with fully and permanently paved yard space such as high-rise buildings and flats.
HIL C	Public open space such as parks, playgrounds, playing fields, secondary schools and footpaths. It does not include undeveloped public open space such as bush land and nature reserves which should be subject to site specific assessment.
HIL D	Commercial/Industrial such as shops, offices, factories and industrial sites.

For this assessment, NEPM HIL A and HSL A criteria were adopted for the assessment of human health in a low-density residential setting. Further information in relation to calculation and derivation of human health investigation levels is provided in Schedule B4 and B7 of NEPC (2013).

Buildings and structures

For this environmental value ERS Part 4 Land specifies the objective for land to be not corrosive to or otherwise adversely affecting structures or building materials. Specific indicators include pH, sulphate, chloride, redox potential and salinity. Standards Australia

(AS2159-2009), exposure classifications for concrete piles (Table 6.4.2 (C)) were adopted for the review of buildings and structures.

Aesthetics

For this beneficial use, the Land SEPP states that contamination must not cause the land to be offensive to the senses of human beings.

Production of food, flora and fibre

For this beneficial land use, the review of human health and ecological assessment criteria for low density residential and open space was considered suitable for the protection of food, flora and fibre, as guidelines (particularly HIL A human health guidelines) make an allowance for consumption of home-grown fruit and vegetable produce.

7 Methodology

All work was conducted in accordance with the following guidelines for assessing contaminated sites:

- CRC (2011).
- NEPC (2013).
- Standards Australia (1999, 2005, 2009).
- EPA (2009a, 2009b, 2009c).

Field protocols are provided in Attachment 7.

7.1 Soil vapour survey

At each soil sample location, a headspace measurement of volatile organic compound (VOC) concentrations was taken using a portable MiniRae PID calibrated using isobutylene reference gas. The PID was calibrated in accordance with Connolly Environmental's quality management systems, prior to use on the day of sampling.

7.2 Soil bore sampling methodology

Soil samples were collected from 0-100 mm below the surface using a stainless-steel sampling trowel.

Further discussion regarding sampling location is outlined in section 8.1 below. During sample collection disposable gloves were worn. These were changed following collection of each soil sample.

7.3 Sample collection, storage and analysis

All soil samples were collected into appropriately prepared sample containers provided by the analysing laboratory. After preparation and labelling the samples were placed immediately into an ice-chilled cooler. On return from site, samples were transferred to the sample refrigerator, then couriered to the analysing laboratory on the morning of the following day in ice-chilled coolers.

All laboratory analyses were conducted by NATA endorsed laboratories using NATA approved analytical methods. In addition, laboratory practices were in general accordance with relevant NEPM guidelines outlined in Schedule B (3) Guideline on Laboratory Analysis

of Potentially Contaminated Soils (NEPM 2013). The primary laboratory used for analysis of the primary and duplicate samples was ALS. The secondary laboratory used for analysis of split samples was Envirolab.

The NATA-accredited laboratory analysis reports, issued by ALS and Envirolab were within the holding times recommended by Standards Australia (1999, 2005).

7.4 Soil QA/QC sample collection and analysis

Duplicate and split samples

Duplicate and split samples were collected at a rate of 1 in 20 samples collected for analysis by the laboratory in accordance with Australian Standard 4482.1-2005. Duplicate and split samples (and the corresponding primary sample) were collected from the same sample point and distributed evenly into three pre-labelled soil sampling jars, to ensure representative sampling (as per section 8.2.2 of AS4482.1-2005). Please note that to ensure minimal loss of any volatile organics, the soil samples were not mechanically mixed.

8 Wel.Co site soil investigation

Soil investigation sitework was conducted on 19 April 2022 and is detailed in sections 8.1 to 8.3 below.

8.1 Sample locations

Soil samples were collected from 21 representative locations (SB1-SB21) across the eight Lots owned by Wel.Co (the Wel.Co site). Sampling locations are shown in Figure 2, Attachment 1.

8.2 Field observations

At the time of sitework the site surface was significantly vegetated with crops, grasses, shrubs, trees and weeds. The topsoil comprised brown, brown/red and dark brown silty clay with organic matter content with the exception of Area 7 (Lot 1 TP862922) and Area 8 (Lot 2 TP862922) which comprised a mixture of crushed rock and brown silty clay. Soil odour was recorded at all sampling locations.

Photoionisation detector readings were zero, indicating an absence of volatile petroleum hydrocarbons in the samples tested.

8.3 Laboratory analysis program

We collected and analysed 23 soil samples comprising 21 primary samples and two QA/QC samples as set out in Table 7.1 below. The sampling locations are shown in Figure 2, Attachment 1.

Table 8.1 Soil sample analysis program

Bore	Sample Depth (m)	Location	Laboratory analysis schedule

SB20	0.1	**Area 5** Lot 1 TP872395	Screen metals
SB21	0.1	**Area 5** Lot 1 TP872395	EPA IWRG 621 Screen*

*IWRG 621 screen comprises metals (arsenic, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium and zinc), cyanide, fluoride, halogenated and non-halogenated phenols, monoaromatic hydrocarbons (MAH), polyaromatic hydrocarbons (PAH), total recoverable hydrocarbons (TRH), organochlorine pesticides (OC), volatile chlorinated hydrocarbons, chlorinated hydrocarbons and polychlorinated biphenyls (PCB).
**Screen metals (8) comprises arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc.

8.4 Results of soil investigation

Tabulated laboratory analysis results for soil are provided in Attachment 4. The NATA-endorsed laboratory reports are included in Attachment 5.

8.4.1 Soil results compared to human health criteria

Tabulated laboratory analysis results for human health are provided in Table 1, Attachment 4. The laboratory analysis results for soil showed:

- Non-detectable to low concentrations of all relevant analytes, below the adopted human health criteria for vapour intrusion and direct contact in a low-density residential land use setting (NEPM HSL/HIL A).

8.4.2 Soil results compared to ecological criteria

Tabulated laboratory analysis results compared to maintenance of ecosystems criteria are provided in Table 2, Attachment 4. The laboratory analysis results for soil showed:

- Non-detectable to low concentrations of all relevant analytes, below the adopted ecological investigation and screening levels (NEPM EIL/ESL).

8.4.3 Soil results compared to petroleum hydrocarbon management limits

Tabulated laboratory analysis results for petroleum hydrocarbon management limits are provided in Table 3, Attachment 4. The laboratory analysis results for soil showed:

- Non-detectable to low concentrations of all relevant analytes, below the adopted petroleum hydrocarbon management limits criteria.

8.4.4 Soil analytical results compared to waste classification criteria

Soil results were compared with the relevant Victorian waste classification criteria outlined in EPA publication 1828.2 (EPA 2021a). Comparison of results to the relevant assessment criteria for waste classification is provided in Table 4, Attachment 4. Laboratory analysis results of soil samples showed:

- Non-detectable to low concentrations of all relevant analytes including ASLP metals and PAH, below the adopted EPA Fill material upper limits.

8.5 QA/QC review

A summary of results of the quality assurance program for soil samples submitted to the primary and secondary laboratories is provided in Table 7.4 below.

Table 7.4 Summary of quality assurance results

QC sample	Number of results meeting data quality objectives	Total number of results	Percentage meeting data quality objectives
Field splits	6	8	75.0%
Field duplicates	9	9	100%
Internal duplicates	164	164	100%
Internal spikes	101	111	91.0%
Internal blanks	173	175	98.9%
Overall completeness	**453**	**467**	**97.0%**

The overall data quality for soil samples was assessed as 97.0% satisfying the 95% completeness objective. Laboratory results were considered to be suitable for the assessment of soil conditions at the site.

9 Comments on the Ballan-Strategic Directions (Mesh 2018)

The Ballan Strategic Directions (Mesh 2018) presents the framework to guide decision-making by Moorabool Shire Council and other stakeholders about future use and development of land within the town. The document was implemented in the Moorabool Planning Scheme (DTP 2022) as a reference document in Clause 21.11.

According to the current Ballan Framework Plan presented in Clause 21.08 of the Moorabool Planning Scheme (DTP 2022) the Wel.Co site and the adjoining Lots comprise the following growth types and significant features:

- Greenfield growth
- Greenfield growth (proposed lower densities)
- Greenfield growth (proposed larger residential allotments)
- Proposed open space
- Retarding basins and dams (within the proposed open space layer)

Our soil investigation comprised collection of representative samples across the eight Lots owned by Wel.Co as detailed in Section 8 above. The sampling locations included each of the growth types and significant features presented in the Ballan Framework Plan that applied to the site.

An extract of the Ballan Framework Plan marked up with the sampling locations is provided in Attachment 1, Figure 3.

10 Ministerial Direction No. 1 and PPN30 (2021)

Ministerial Direction No.1 – Potentially Contaminated Land (Direction No. 1) requires that planning authorities when preparing a planning scheme amendment, satisfy themselves that the environmental conditions of the land proposed to be used for a sensitive use (defined as residential, child-care centre, pre-school, centre or primary school), agricultural or public open space are, or will be, suitable for that use.

Planning Practice Note 30 (PPN30) provides guidance on implementing the requirements of Ministerial Direction No. 1.

PPN30 provides the following definitions and requirements:

"Potentially contaminated land is defined in Ministerial Direction No.1- Potentially Contaminated Land and Clause 73.01 General Terms of the Victoria Planning Provisions (VPP) as land:

(a) used or known to have been used for industry or mining;

(b) used or known to have been used for the storage of chemicals, gas, waste or liquid fuel (other than minor above-ground storage that is ancillary to another use of the land); or

(c) where a known past or present activity or event (occurring on or off the land) may have caused contamination on the land".

PPN30 requires that *"If land is determined to be potentially contaminated, the planning or responsible authority must require appropriate assessment as part of a planning scheme amendment or permit application".*

PPN30 also states that *"If the review of the current and historical use of the land and surrounds shows a history of non-contaminating activities and there is no other evidence or suspicion for contamination, further investigation is not required".*

Our review of PPN30 included a comparison of the identified former site uses with land uses with potential to contaminate land as set out in Table 2.

11 Conclusions

Based on the findings of our Phase 1 Contamination Assessment & soil investigation, we concluded the following for the Wel.Co site:

- Our site history review showed that since at least 1961 the Wel.Co site had been agricultural land.

- At the time of our inspection the Wel.Co site had been used for cropping and/or grazing.
- Our site inspection did not find any evidence of stockpiled soil, storage of chemicals or any other activity or event occurring at the Wel.Co site which may have caused contamination on the land.
- All soil samples collected from the Wel.Co site met human health and ecological criteria for sensitive use (including low density residential use). The sampling locations included each of the growth types and significant features presented in the Ballan Framework Plan.
- As the work for this report showed a history of non-contaminating activities and as there was no other evidence or suspicion for contamination, the Wel.Co site was not potentially contaminated as defined by the General Practice Note and PPN30, and further investigation is therefore not required.

Based on the findings of our Phase 1 Contamination Assessment, we concluded the following for the adjoining Lots:

- Our site history review showed that since at least 1961 the adjoining Lots had been agricultural land with rural residential properties.
- With the exception of 5580 Geelong-Ballan Rd, as the work for this report showed a history of non-contaminating activities and as there was no other evidence or suspicion for contamination on the adjoining lots, the adjoining lots were not potentially contaminated as defined by the General Practice Note and PPN30, and further investigation is therefore not required.
- With respect to 5580 Geelong-Ballan Rd, our client made multiple unsuccessful attempts to gain access approval to the property. We were therefore unable to inspect or sample the material stockpiled on that property. As the origin or content details of these waste stockpiles were unknown, we considered that they represented a medium potential for contamination as set out in Table 2 of PPN30.

12 Recommendations

- As the Wel.Co site and the adjoining lots with the exception of 5580 Geelong-Ballan Rd, met the General Practice Note and PPN30 criteria for land that is not potentially contaminated we have made no recommendations for further assessment or remediation of these areas.
- With respect to 5580 Geelong-Ballan Rd, as this land is potentially contaminated. As set out in PPN30, we recommend that Council take whatever measure necessary to impose a mechanism on that property at 5580 Geelong for further reporting to be completed prior to any development of that property, and we would support the application of an Environmental Audit Overlay to this lot.

Regards,

Mark Connolly

Client Program Ref: **22028b Ballan**

LOR = Limit of reporting. When a reported LOR is higher than the standard LOR, this may be due to high moisture content, insufficient sample or matrix interference.
CAS Number = Chemistry Abstract Services Number. The analytical procedures in this report (including in house methods) are developed from internationally recognised procedures such as those published by USEPA, APHA and NEPM.

Samples not collected by ALS and are tested as received.

Samples are tested within holding time unless otherwise

A blank space indicates no test performed. Soil microbiological testing was commenced within 4 days from the day collected unless otherwise stated.
Water microbiological testing was commenced on the day received and within 24 hours of sampling unless otherwise stated.
MM524: Plate count results <10 per mL and >300 per mL are deemed as approximate.
MM526: Plate count results <2,500 per mL and >250,000 per mL are deemed as approximate.
Calculated results are based on raw data.

Samples not collected by ALS and are tested as received.

Samples are tested within holding time unless otherwise

A blank space indicates no test performed. Soil microbiological testing was commenced within 4 days from the day collected unless otherwise stated.
Water microbiological testing was commenced on the day received and within 24 hours of sampling unless otherwise stated.
MM524: Plate count results <10 per mL and >300 per mL are deemed as approximate.
MM526: Plate count results <2,500 per mL and >250,000 per mL are deemed as approximate.
Calculated results are based on raw data.

LOR = Limit of reporting. When a reported LOR is higher than the standard LOR, this may be due to high moisture content, insufficient sample or matrix interference.
CAS Number = Chemistry Abstract Services Number. The analytical procedures in this report (including in house methods) are developed from internationally recognised procedures such as those published by USEPA, APHA and NEPM.

Client: Connolly Environmental
Client Program Ref: 22028b Ballan

LOR = Limit of reporting. When a reported LOR is higher than the standard LOR, this may be due to high moisture content, insufficient sample or matrix interference.
CAS Number = Chemistry Abstract Services Number. The analytical procedures in this report (including in house methods) are developed from internationally recognised procedures such as those published by USEPA, APHA and NEPM.

QUALITY CONTROL - BLANKS

QC Blanks are an 'analyte free' matrix in which all applicable reagents have been added in the same proportion as in standard samples and are an internal monitor for laboratory contamination.

					Value
Lab Sample ID	**Client Sample ID**	**Analysis**	**Analyte**

QUALITY CONTROL - DUPLICATES

QC Data for duplicates is calculated on raw 'unrounded' values. Laboratory duplicates are randomly selected samples tested by the laboratory to maintain method precision and provide information on sample homogeniety.
RPD = Relative Percentage Difference for duplicate determinations. RPD's that fall outside the general acceptance criteria will be attributed to non-homogeneity of samples or results of low magnitudes.

					Sample Value	Duplicate Value	% RPD
Lab Sample ID	**Client Sample ID**	**Analysis**	**Analyte**				
7427635	NCP	pH	pH, units	Units	6.2	6.2	0.5

QUALITY CONTROL - SPIKES

QC Data for spikes is calculated on raw 'unrounded' values. Laboratory spikes are randomly selected samples in which the analytes in question have been artificially introduced and recovered via standard analysis and are used to provide information on potential matrix effects on analyte recoveries.
Spike recoveries that fall outside the general acceptance criteria will be attributed to sample matrix interference or results of high magnitudes.
NCP: Non-Customer Parent (sample quality is representative of the analytical batch but the sample that was QC tested belongs to a customer not pertaining to the report.)

Samples not collected by ALS and are tested as received.

Samples are tested within holding time unless otherwise

A blank space indicates no test performed. Soil microbiological testing was commenced within 4 days from the day collected unless otherwise stated.
Water microbiological testing was commenced on the day received and within 24 hours of sampling unless otherwise stated.
MM524: Plate count results <10 per mL and >300 per mL are deemed as approximate.
MM526: Plate count results <2,500 per mL and >250,000 per mL are deemed as approximate.
Calculated results are based on raw data.

DATA QUALITY ASSESSMENT SUMMARY

Report Details

Envirolab Report Reference	**31005**
Client ID	Connolly Environmental
Project Reference	22028b Ballan
Date Issued	22/04/2022

QC DATA

All laboratory QC data was within the Envirolab Group's specifications.

HOLDING TIME COMPLIANCE EVALUATION

All preservation / holding times (based on AS/ASPHA/ISO/NEPM/USEPA reference documents and standards) are compliant.

Certain analyses have had their recommended technical holding times elongated by filtering and/or freezing on receipt at the laboratory (e.g. BOD, chlorophyll/Pheophytin, nutrients and acid sulphate soil tests).

COMPLIANCE TO QC FREQUENCY (NEPM)

Internal laboratory QC rate complies with NEPM requirements (LCS/MB/MS 1 in 20, Duplicates 1 in 10 samples). Note, samples are batched together with other sample consignments in order to assign QC sample frequency.

QC Evaluation

Duplicate(s) was performed as per NEPM frequency	✓
Laboratory Control Sample(s) were analysed with the samples received	✓
A Method Blank was performed with the samples received	✓
Matrix spike(s) was performed as per NEPM frequency (Not Applicable for Air samples)	✓

Refer to Certificate of Analysis for all Quality Control data.

CERTIFICATE OF ANALYSIS 31005

Client Details

Client	Connolly Environmental
Attention	Mariana Vasquez-Bermudez
Address	142 Dynon Road, West Melbourne, VIC, 3003

Sample Details

Your Reference	**22028b Ballan**
Number of Samples	1 Soil
Date samples received	20/04/2022
Date completed instructions received	20/04/2022

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date results requested by	28/04/2022
Date of Issue	22/04/2022

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Results Approved By
Chris De Luca, Operations Manager

Authorised By

Pamela Adams, Laboratory Manager

NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

Statewide Waste and Resource Recovery Infrastructure Plan Facilities

Statewide Waste and Resource Recovery Infrastructure Plan Facilities within the dataset buffer:

Map Id	Owner	Site Name	Address	Suburb	Category	Sub Category	Loc Conf	Distance	Direction
N/A	No records in buffer								

SWRRIPF Data Source: State Government Victoria - Department of Sustainability

EPA Prescribed Industrial Waste

EPA Prescribed Industrial Waste treaters, disposers and permitted transporters within the dataset buffer:

Map Id	Company Name	Address	Suburb	Treatment /Disposal	Transport	Accredited Agent	EPA List Status	Loc Conf	Dist (m)	Dir
N/A	No records in buffer									

Prescribed Industrial Waste Data Source: State Government Victoria - Environment Protection Authority (EPA)

Waste Management Facilities & Landfills

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

EPA Victorian Landfill Register

EPA Victorian Landfill Register sites within the dataset buffer:

Landfill Register No.	Site	Address	Operating Status	Est. Year Of Closure	Waste type	Loc Conf	Dist (m)	Direction
N/A	No records in buffer							

EPA Victorian Landfill Register Data Source: State Government Victoria - Environment Protection Authority (EPA)

Former Gasworks and Liquid Fuel Facilities

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Former Gasworks

Former Gasworks identified from various historical sources within the dataset buffer:
Note - As this is a dataset collated from various historical sources, it is not an exhaustive list of all former Gasworks

Map Id	Site Name	Date Opened	Year Closed	Location Confidence	Distance	Direction
N/A	No records in buffer					

Former Gasworks Data Source: Collated from various historical sources

National Liquid Fuel Facilities

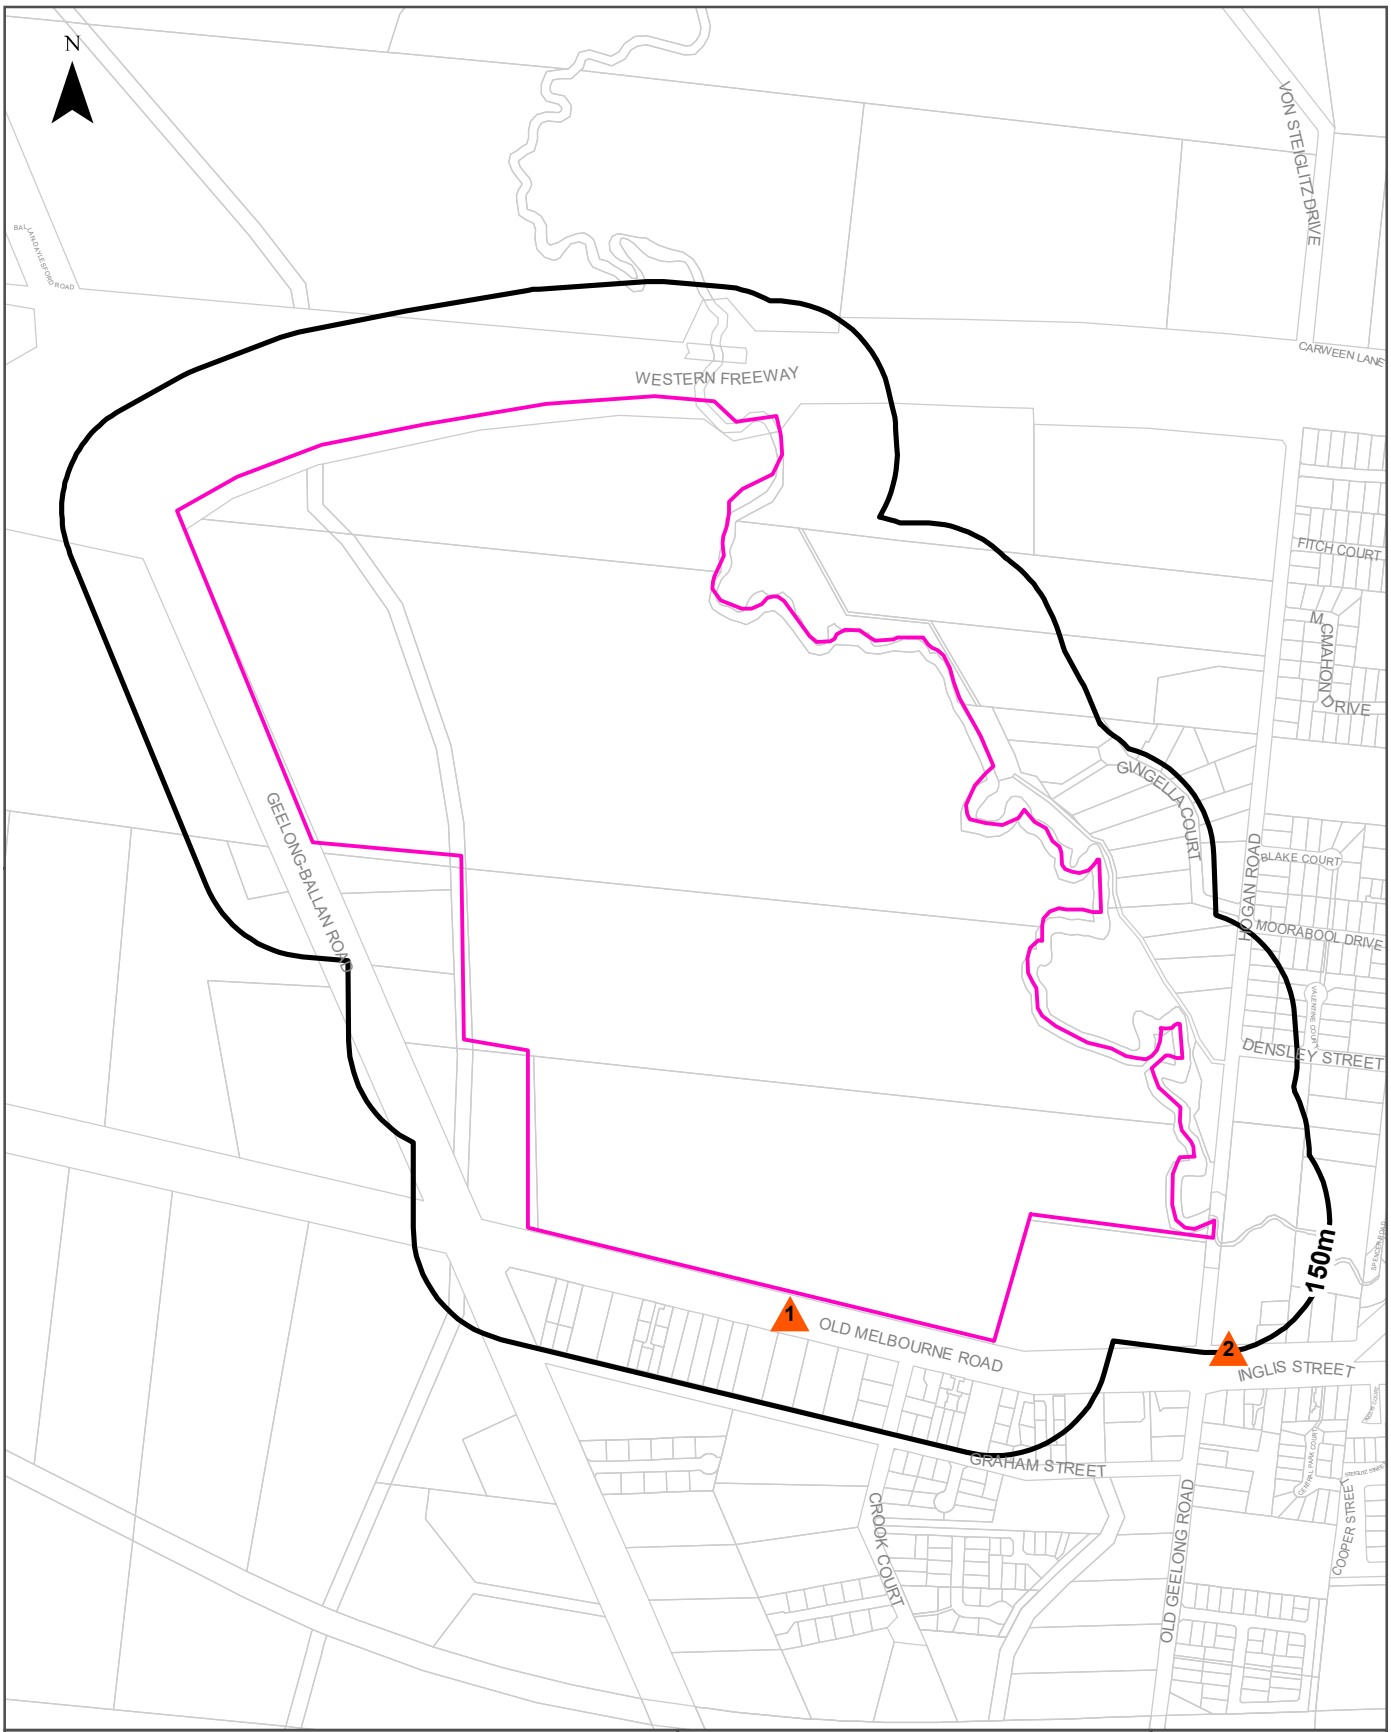
National Liquid Fuel Facilties within the dataset buffer:

Map Id	Owner	Name	Address	Suburb	Class	Operational Status	Operator	Revision Date	Loc Conf	Dist (m)	Direction
N/A	No records in buffer										

National Liquid Fuel Facilities Data Source: Geoscience Australia

Historical Business Directories

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342



Legend

- Site Boundary
- Buffer 150m
- Property Boundary
- Business directory records mapped to a specific premise
- Business directory records mapped to a road intersection
- Business directory records mapped to a road corridor
- Business directory records mapped to a general area

Historical Business Directories

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Business Directory Records 1905-1991
Premise or Road Intersection Matches

Universal Business Directory and Sands & McDougall Directory records, from years 1991, 1980, 1970, 1960, 1950, 1945, 1925 & 1905, mapped to a premise or road intersection within the dataset buffer:

Map Id	Business Activity	Premise	Ref No.	Year	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
N/A	No records in buffer						

Business Directory Records 1905-1991
Road or Area Matches

Universal Business Directory and Sands & McDougall Directory records, from years 1991, 1980, 1970, 1960, 1950, 1945, 1925 & 1905, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

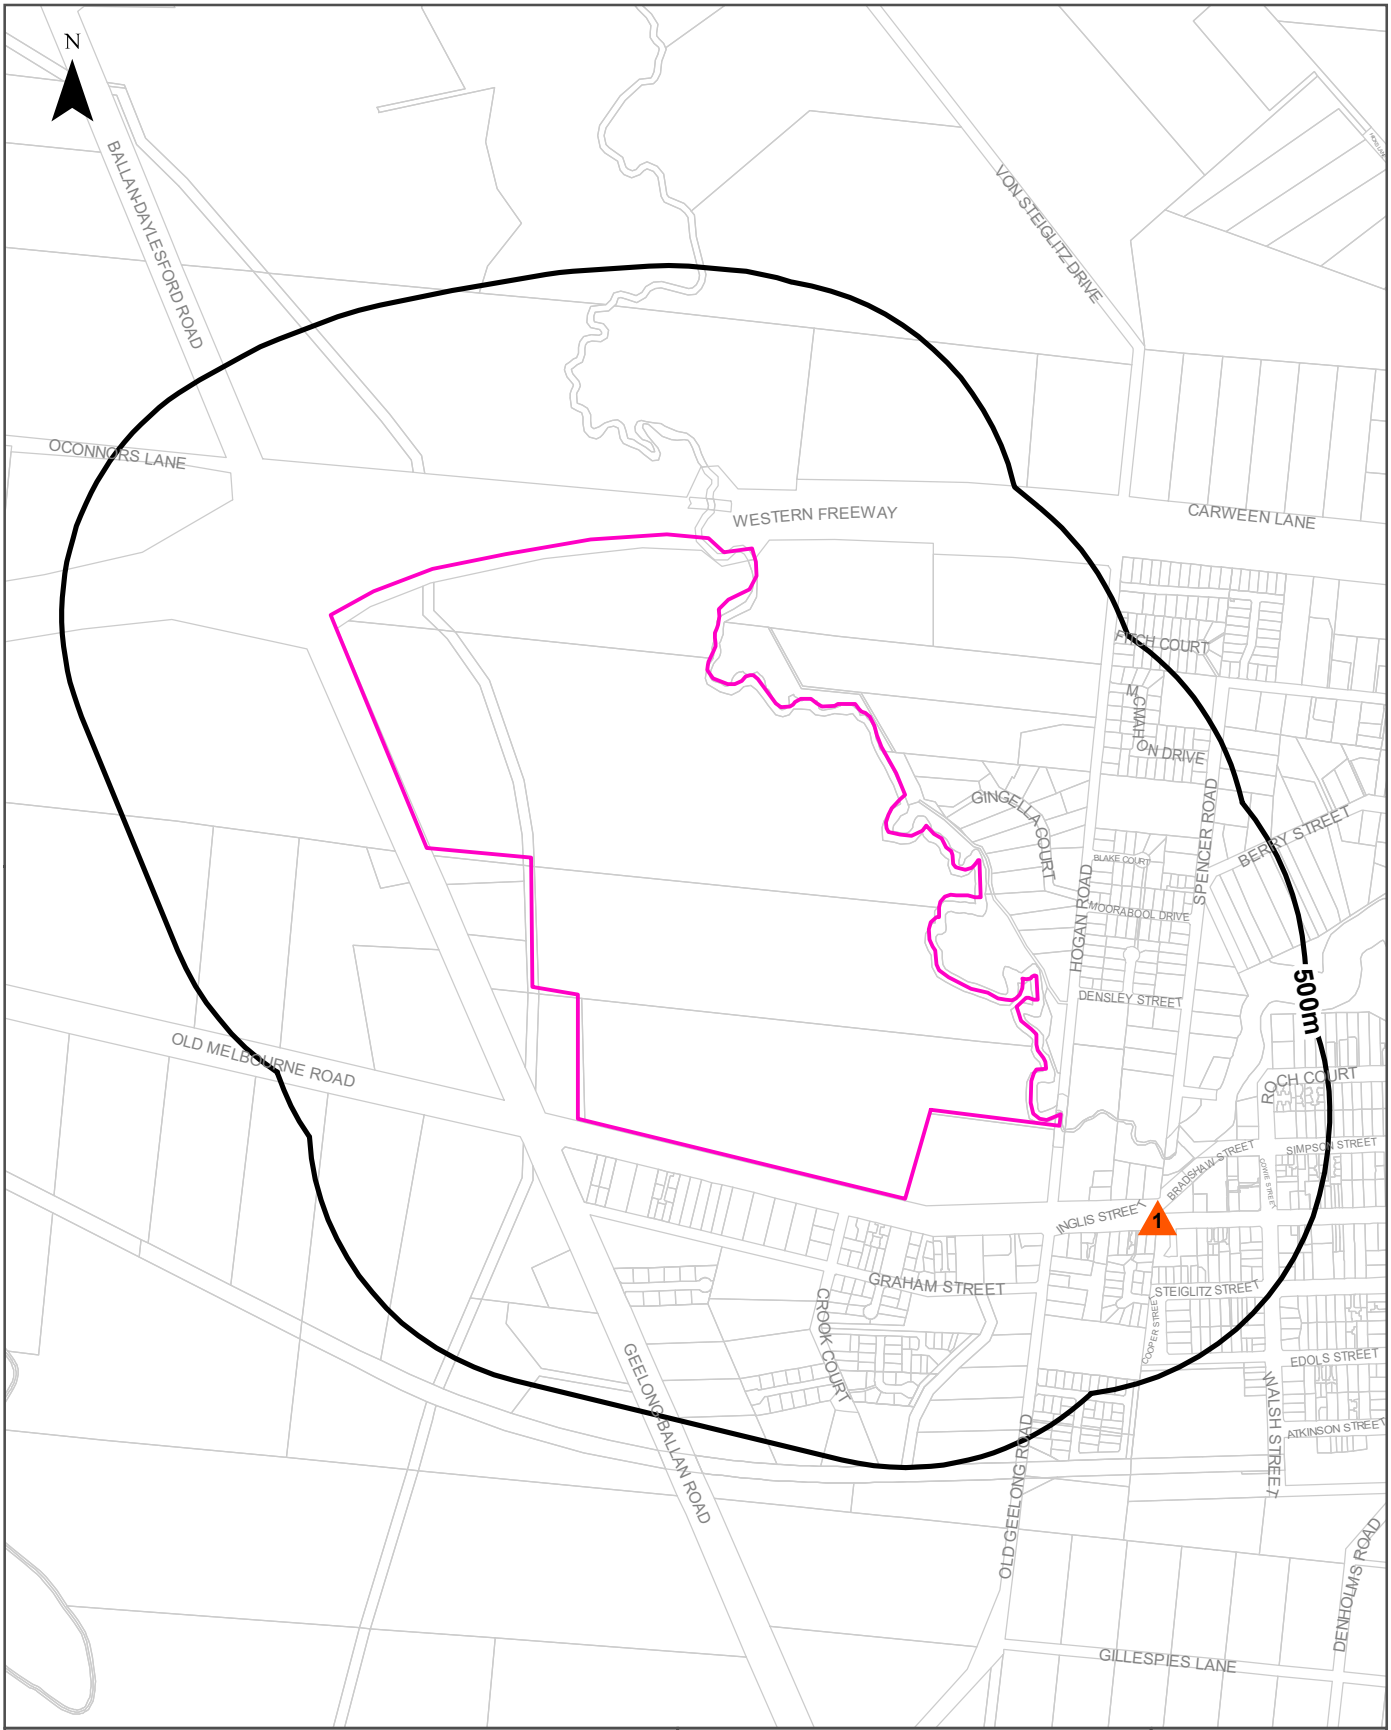
Dry Cleaners, Motor Garages & Service Stations

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342



Legend

- Site Boundary
- Buffer 500m
- Property Boundary
- Business directory records mapped to a specific premise
- Business directory records mapped to a road intersection
- Business directory records mapped to a road corridor
- Business directory records mapped to a general area

Scale: 0 190 380 570 760 Meters

Coordinate System: GDA 1994 MGA Zone 55

Date: 19 April 2022

Historical Business Directories

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Dry Cleaners, Motor Garages & Service Stations Premise or Road Intersection Matches

Dry Cleaners, Motor Garages & Service Stations from Sands & McDougall's Directories and UBD Business Directories, mapped to a premise or road intersection within the dataset buffer.

Map Id	Business Activity	Premise	Ref No.	Year	Location Confidence	Distance to Property Boundary or Road Intersection	Direction
N/A	No records in buffer						

Dry Cleaners, Motor Garages & Service Stations Road or Area Matches

Dry Cleaners, Motor Garages & Service Stations from UBD Business Directories and Sands & McDougall's Directories, mapped to a road or an area within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published.

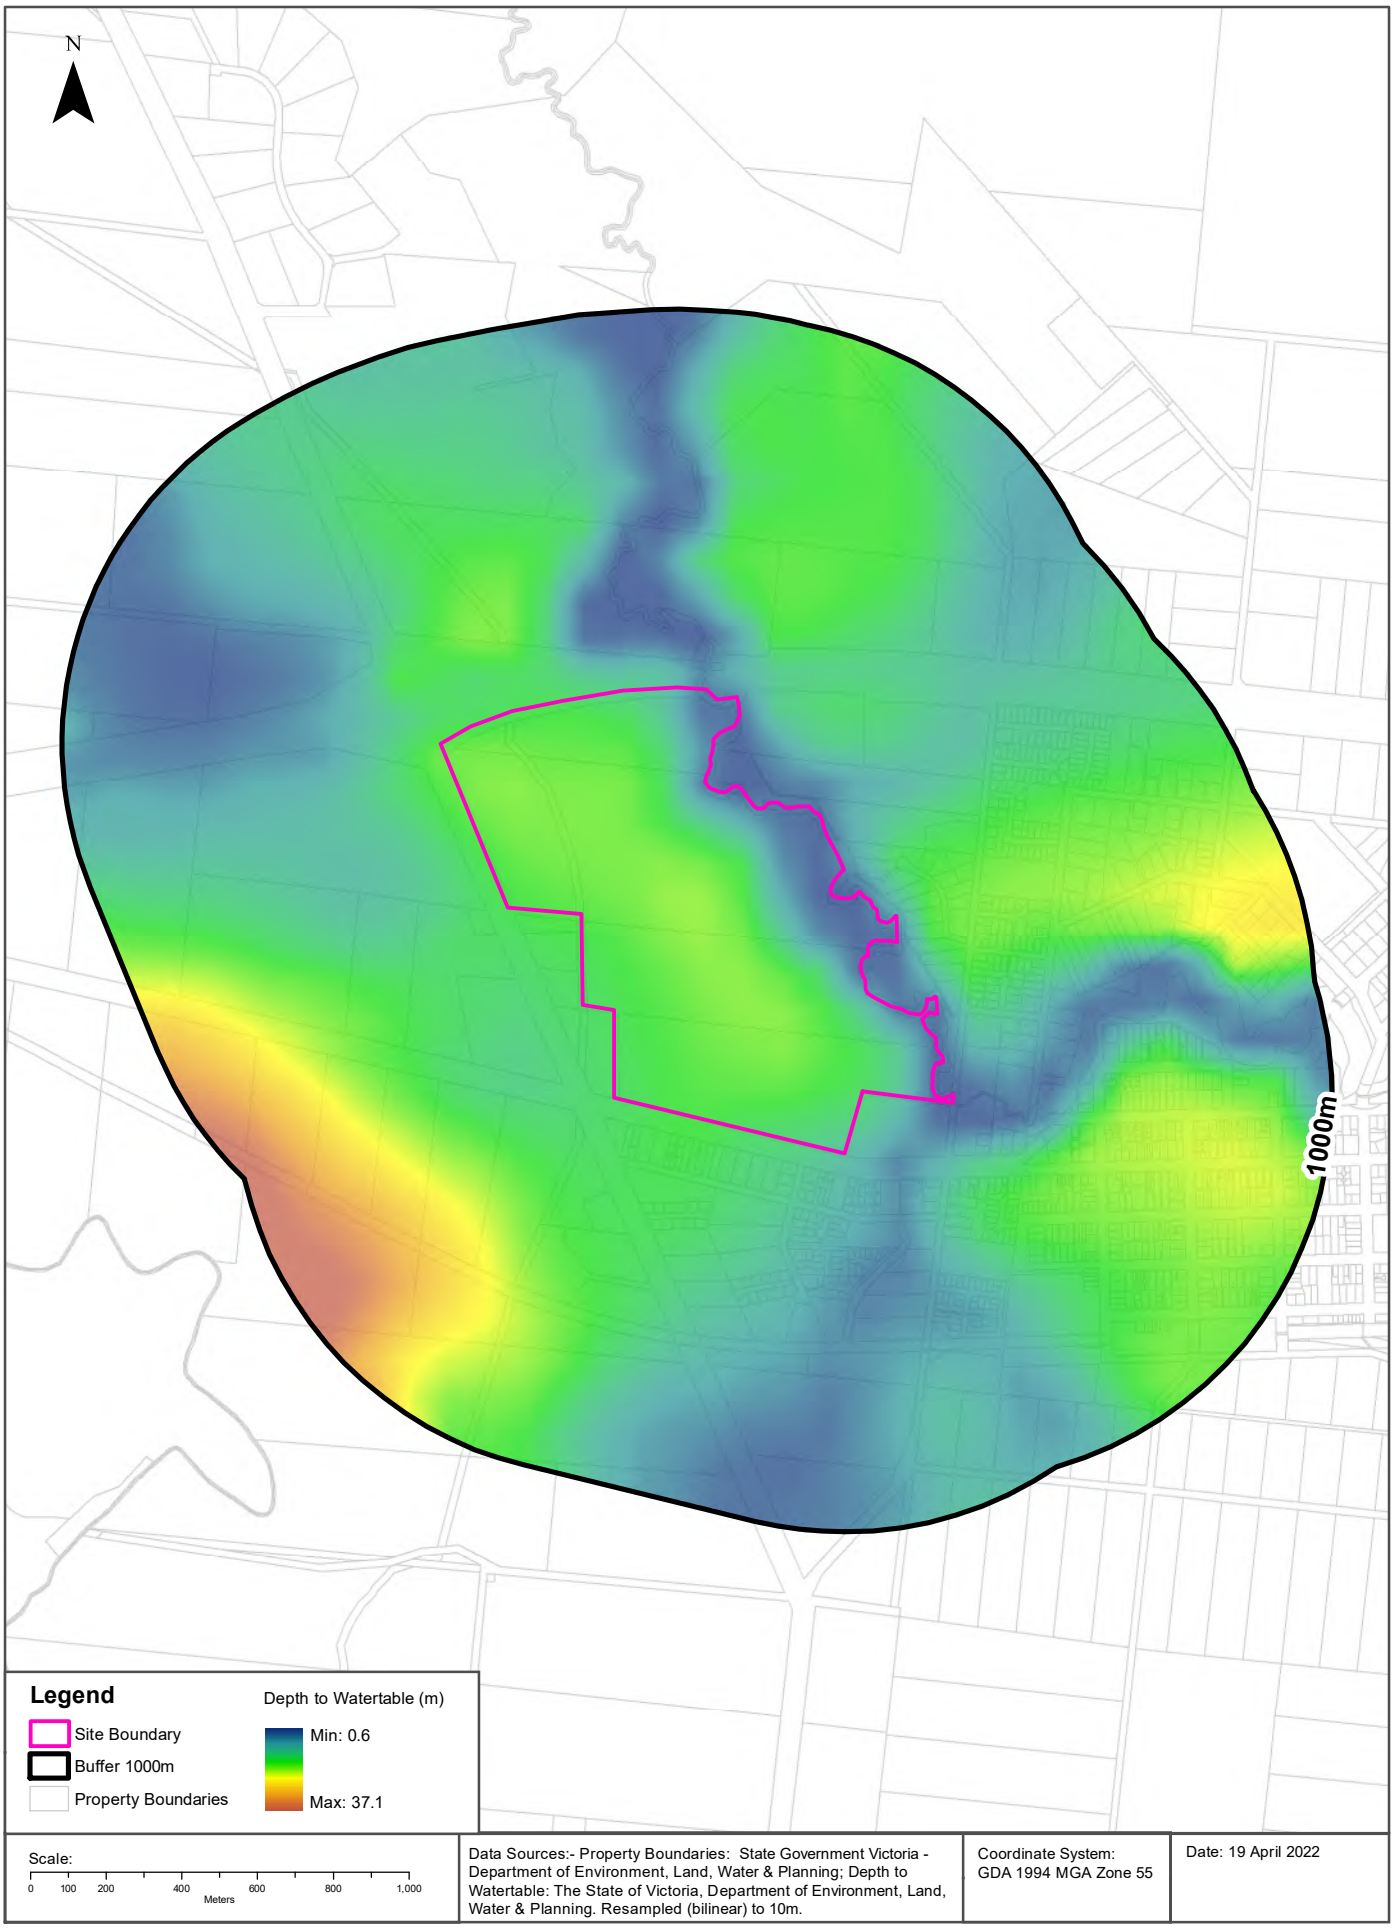
Depth to Watertable

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342



Hydrogeology & Groundwater

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Hydrogeology

Description of aquifers within the dataset buffer:

Description	Distance	Direction
Fractured or fissured, extensive highly productive aquifers	0m	On-site
Fractured or fissured, extensive aquifers of low to moderate productivity	918m	West

Hydrogeology Map of Australia: Commonwealth of Australia (Geoscience Australia)

Groundwater Salinity

On-site Groundwater Salinity:

Groundwater Salinity	Percent Of Site Area
1,000 - 3,500 mg/l	100
500 - 1,000 mg/l	<1

Depth to Watertable

On-site Depth to Watertable:

Depth to Watertable	Percent Of Site Area
10 to 20 metres	82
Less than 5 metres	14
5 to 10 metres	3

Surface Elevation

Approximate on-site Surface Elevation:

Surface Elevation
488 AHDm to 518 AHDm

Basement Elevation

Approximate on-site Basement Elevation:

Basement Elevation - Basement Rocks comprise Lower Palaeozoic basement rocks that form the highlands and the crystalline basement; and Mesozoic rocks of the Otway and Gippsland basins both outcropping and subsurface
462 AHDm to 484 AHDm

Historical Mining Activity - Shafts

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Historical Mining Activity - Shafts

Mine Shaft Locations were collected by a variety of methods from 1869 in some areas of the state, mainly concentrating in Ballarat and Bendigo. In places a shaft may be recorded multiple times with a different source. In cases where several shaft locations are shown close together (generally with separations less than stated position errors) and they have different sources, it is possible that one shaft has been mapped several times. In cases where several shaft locations are shown close together but they have the same information source, it is possible that each shaft location represents a different shaft on the ground.

Historical Mine Shafts within the dataset buffer:

Map Id	Name	Source	Depth (m)	Collar (ft)	Fill/Cap Method	Location Desc	Location Accuracy	Distance	Direction

Geological Units 1:50,000

What are the Geological Units within the dataset buffer?

Symbol	Name	Description	Geological Age	Lithology	Distance	Direction
Neo	Newer Volcanic Group - basalt flows (Neo): generic	Olivine tholeiite, quartz tholeiite, basanite, basaltic icelandite, hawaiite, mugearite, minor scoria and ash, fluvial sediments: tholeiitic to alkaline; includes sheet flows and valley flows and intercalated gravel, sand, clay	Miocene to Holocene	alkali basalt (major proportion); tholeiitic basalt (major proportion); alluvium (minor proportion); tuff (minor proportion)	0m	On-site
Qa1	alluvium(Qa1): generic	Gravel, sand, silt: variably sorted and rounded; generally unconsolidated; includes deposits of low terraces; alluvial floodplain deposits	Pleistocene to Holocene	gravel material (significant); sand (significant); silt material (significant)	0m	On-site
Na	incised alluvium (Na): generic	Gravel, sand, silt, minor ferricrete; variably incised.	Pliocene to Pleistocene	silt material (significant); sand (significant); gravel material (significant)	0m	On-site
Qm1	swamp and lake deposits (Qm1): generic	Grey to black carbonaceous mud, silt, clay, minor peat: generally unconsolidated; rare dolomite	Pleistocene to Holocene	mud (major proportion); silt material (significant); clay lithology (significant); peat (minor proportion)	122m	West
Qc1	colluvium(Qc1): generic	Diamictite, gravel, sand, silt, clay, rubble: sorting variable, usually poor; generally poorly rounded; clasts locally sourced; includes channel deposits with better rounding and sorting	Pliocene to Holocene	diamictite (dominant); gravel material (significant); sand (significant); silt material (significant)	259m	South East
Ocb	Castlemaine Group - Bendigonian(Ocb): generic	Sandstone, mudstone, black shale and minor granule quartz conglomerate: mostly thick-bedded sandstone, coarse- to fine-grained, often graded, diffusely stratified to cross laminated, moderately to well sorted; sparsely fossiliferous with graptolites and	Bendigonian to Bendigonian	sandstone (significant); mudstone (significant); shale (significant); conglomerate (minor proportion)	858m	South West
Pxb	Bacchus Marsh Formation (Pxb): generic	Tillite, diamictite, sandstone, mudstone, conglomerate: tillite and diamictite grey; massive to slump-folded; conglomerates range from pebble to boulder size; generally well-rounded; of highly varied lithology; mudstone dark grey to black; thinly bedded	Carboniferous to Permian	tillite (significant); diamictite (significant); sandstone (significant); mudstone (significant)	954m	South West

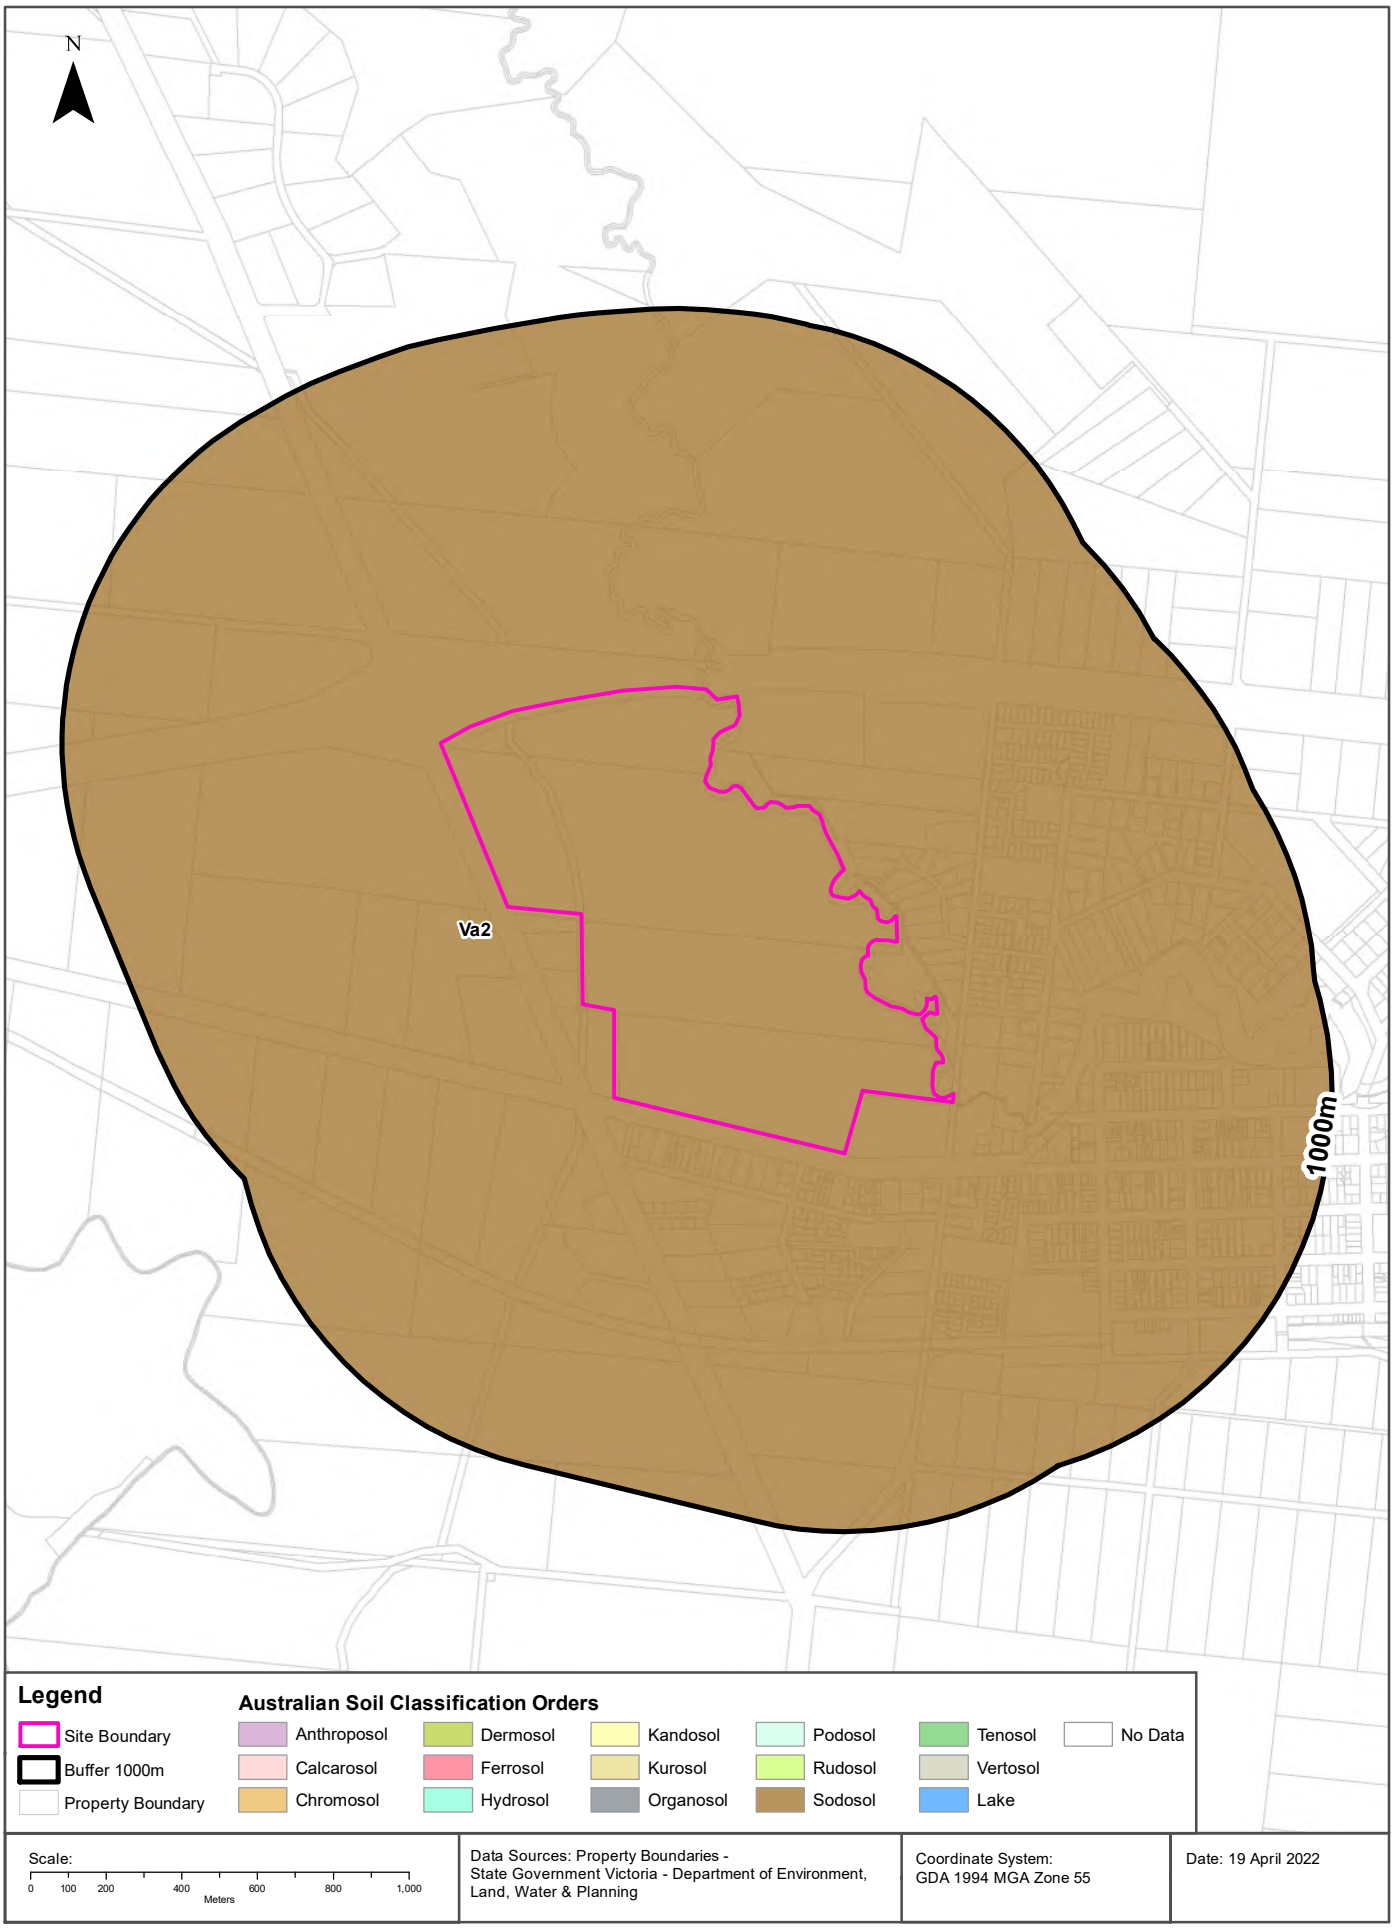
Atlas of Australian Soils

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342



Soils

Western Freeway, Geelong-Ballan Road & Old Melbourne Road, Ballan, VIC 3342

Atlas of Australian Soils

Soil mapping units and Australian Soil Classification orders within the dataset buffer:

Map Unit Code	Soil Order	Map Unit Description	Distance	Direction
Va2	Sodosol	Plains with occasional stony rises: gilgai plains of hard alkaline and neutral yellow mottled soils (Dy3_43 and Dy3.42) in association with small areas of cracking grey clays (Ug5.2) which may be dominant locally; stony rises with shallow friable loamy soils (Um6.12, Um6.13, Um6.21, Um6.24, and Um6.41); dark cracking clays (Ug5. 16) on terraces and some floodplains along stream valleys; minor areas of (Dy3.41), (Dy3.11), (Dy5.42), and (Ug5.1) occur on the plains as well. Ironstone gravs are a common feature of surface horizons of (D) soils. Some volcanic cones occur in the Va2 area in Sheet 2 but their associated soils are not described.	0m	On-site

Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading “LC” or “LocConf”. These codes lookup to the following location confidences:

LC Code	Location Confidence
Premise Match	Georeferenced to the site location / premise or part of site
Area Match	Georeferenced to an approximate or general area
Road Match	Georeferenced to a road or rail corridor
Road Intersection	Georeferenced to a road intersection
Buffered Point	A point feature buffered to x metres
Adjacent Match	Land adjacent to a georeferenced feature
Network of Features	Georeferenced to a network of features
Suburb Match	Georeferenced to a suburb boundary
As Supplied	Spatial data supplied by provider

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

1. End User acknowledges and agrees that:
   (a) the Report is compiled from or using content (**Third Party Content**) which is comprised of:
      (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (**Third Party Content Suppliers**); and
      (ii) content which is derived from content described in paragraph (i);
   (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
   (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
   (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
   (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
   (f) Lotsearch has not undertaken any physical inspection of the property;
   (g) neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
   (h) the Report does not include any information relating to the actual state or condition of the Property;
   (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
   (j) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
   (k) the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
4. The End User hereby to the maximum extent permitted by law:
   (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

Report or these Terms;

(b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and

(c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.

5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
    (a) any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
    (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,

    irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.
12. These Terms are subject to New South Wales law.

Attachment 7 Field protocols

1 Soil sampling

1.1 Soil sample collection

Collect all samples on the basis of a prepared sampling plan. Take samples from excavation pits and trenches by using the excavation bucket to scoop a slab of material from the required sample point. Remove the sample from this slab using a stainless steel sample spoon and place into a 250 ml glass sample jar. Immediately cap jar samples with a plastic screw cap. Label each sample and place into a chilled cooler box.

Collect surface samples of unconsolidated soil from the 0.1-0.2m layer using a stainless steel sample spoon. Cap, label and store these samples as described above.

Collect samples from soil bores using the method set out in the work scope for the job. This will be one or more of:

- Geoprobe direct push plastic liners.
- SPT sampler.
- Direct from auger flights.
- Hand auger inserted into the bore.
- Grab sample from the bore cuttings.

1.2 Operation of MiniRAE photoionisation detector

Analyse for organic vapors in the field using a Rae Systems photoionisation detector (PID). This PID is a small, battery operated handheld unit that measures the concentration in ppm of volatile organic compounds in the soil. A small pump in the PID draws the air to be sampled into the PID. Within the PID the air passes over a 10.6 eV gas discharge lamp in an ionisation chamber. The PID measures the amount of ionisation that occurs each second, and from this computes the organic vapor concentration of the air drawn in by the PID. An LED screen on the PID gives a readout of the concentrations at 1 second intervals. The peak reading for each sample is recorded as the organic vapor concentration of that sample. If required, the Rae Systems PID can be used to log data for subsequent downloading to a computer.

The Rae Systems PID is calibrated using 100 ppm isobutylene reference gas. In addition, zero gas calibration is carried out in the field using the supplied calibration adapter and charcoal filter element.

To analyse the organic vapor concentration of sampled soil in the field, place approximately 50 ml volume of the sampled soil into a pre-labelled zip-lock plastic bag, and immediately seal the bag, trapping air inside the bag in the process. Shake the bag to mix the contents then place it in an unchilled cooler box. In this way it is ensured that the field analysis temperature of all samples is similar. After 5 minutes equilibration analyse the sample headspace by opening one corner of the zip-lock and inserting the PID inlet tube directly into the bag. Record the maximum reading obtained.

2 Decontamination

Clean and decontaminate soil sampling equipment after each sample is collected. For soil sampling and groundwater sampling equipment, implement the following decontamination sequence:

- Clean with *Decon* (or similar phosphate free detergent) mixed with tap water.
- Multiple rinse (3 times) with clean tap water.
- Multiple rinse (3 times) with deionised water.
- Clean and decontaminate drill rig after completion of each bore using high pressure water jet.

3 Sample handling

At the conclusion of sample collection check all samples to ensure they are fully and correctly labeled. Take samples in a chilled cooler box to the Connolly Environmental office and refrigerate samples until delivery to the analysing laboratory. Upon return to office, fill out a chain of custody and analysis request form. This form serves two purposes:

- It tracks the movement of the sample batch from the time of sample collection to the time of acceptance by the analysing laboratory.
- It lists the full sample set, and provides the laboratory with all the information needed to carry out the required analysis.

4 QA/QC procedures for sample analysis

Consign samples only to laboratories that have NATA registration and a full quality assurance program, including the use of laboratory duplicates, blanks and handspikes to monitor analysis accuracy, precision and completeness.

As a further check on the reliability of laboratory results, collect field duplicate and split samples at the rate of 1 field duplicate/split set per 20 samples. Send the field duplicate sample to the analysing laboratory and the field split sample to a second NATA registered laboratory which has in place a full quality assurance program.

As a part of preparation of the project report assess the outcomes of the internal laboratory QA/QC measures, and the field duplicate/split analysis program, to test whether the data quality objectives have been met.
